

ABOUT COFFEY RAIL

Transportation infrastructure is essential to enable the development and growth of communities around the globe. Climate change, energy security and urban congestion are challenges that create significant opportunities for the rail sector.

Coffey Rail is a specialist engineering consultancy delivering innovative and smarter solutions that connect communities.

We provide leading strategic, modelling, design, management and implementation services to clients in the rail industry.

Our services include condition assessment of existing infrastructure, level crossing upgrade design, rail operations simulation, system integration management, testing and commissioning, and project delivery management.
